

Data-Flow App Bedienung Cheatsheet

1. Start MTT executable from Clion IDE (Make sure you start the MTT which is in Tangible_Data_Flow/ccp)
→ **Clion > open the tab „Run“ > select „Run MTT*“ (first option)**
2. Open a Terminal window, navigate to Devel/projects/Tangible_Data_Flow/python and run the http_server:
→ **python3 Data_Flow_http_server.py**
3. Open a new Terminal window, navigate to Devel/projects/Tangible_Data_Flow and activate the python virtual environment
→ **source dataflow_env/bin/activate**
4. navigate to the python dir with `cd ./python`, and run the Data-Flow App:
→ **python Data_Flow_App.py**

If Json gets corrupted:

in the Devel/projects/Tangible_Data_Flow/python directory, run

→ **rm node_data.json**

→ **cp ../node_data.json ./node_data.json**

if you accidentally delete the wrong node_data.json, download a new one from

https://github.com/VincentEichenseher/Tangible_Data_Flow/blob/main/node_data.json
